PROFESSIONAL SUMMARY

Computer Science student at Arab Open University (Class of 2027) with hands-on experience in cybersecurity, application security testing, and data analysis. Proficient in Python, Linux, and networking fundamentals. Practical experience in CTF competitions, penetration testing tools, SAST and DAST methodologies, DevSecOps concepts, and OWASP Top 10 vulnerabilities via PortSwigger labs. Eager to contribute to a security team and grow through real-world challenges.

EDUCATION

B.A. in Computer Science — Arab Open University, Cairo, Egypt

Expected Graduation: 2027

TECHNICAL SKILLS

Security Testing: SAST, DAST, Vulnerability Assessment, Penetration Testing

DevSecOps: DevSecOps Concepts, Secure SDLC, Security Integration in CI/CD Pipelines

Security Tools: Burp Suite, Nmap, Wireshark, Metasploit (basic)

Web Security: OWASP Top 10, SQL Injection, XSS, CSRF, Authentication Bypass

Programming: Python, C++, SQL

Data & Analysis: Pandas, Seaborn, EDA, Data Wrangling, Anomaly Detection

Systems: Linux (internals and CLI), TCP/IP, Cisco CCNA concepts

PROJECTS AND PRACTICAL EXPERIENCE

Web Security Labs — PortSwigger Web Security Academy

2023 – Present

- Solved hands-on labs covering OWASP Top 10: SQL Injection, XSS, CSRF, and Authentication flaws.
- Practiced DAST techniques in real environments built by the creators of Burp Suite.
- Developed strong understanding of web attack vectors and remediation strategies.

Cybersecurity CTF Challenges — TryHackMe

2023 – Present

- Completed CTF challenges covering Linux exploitation, web attacks, and privilege escalation.
- Applied penetration testing techniques: reconnaissance, exploitation, and post-exploitation.
- Practiced network analysis, log review, and vulnerability identification.

Hands-On Security Tool Practice

2023 – Present

- SAST: Reviewed source code for insecure patterns, hardcoded secrets, and injection flaws.
- DAST: Tested live web apps using Burp Suite for XSS, SQLi, and authentication bypass.
- Performed network reconnaissance and port scanning using Nmap.
- Analyzed network traffic using Wireshark to identify anomalies and suspicious patterns.
- Explored basic exploitation in controlled lab environments using Metasploit.

Python Security Scripting

2023 – Present

- Developed Python scripts to automate security tasks and parse security-related data.
- Applied Python for log analysis and pattern detection in security scenarios.

Airline Passenger Data Analysis

April 2026

- Built a comprehensive data analysis pipeline to extract actionable insights from airline passenger datasets.
- Implemented advanced data wrangling and anomaly detection workflows to ensure high data quality.
- Performed EDA using Python, Pandas, and Seaborn to generate visual trends for strategic decision-making.

Hardware and POS System Configuration

May 2026

- Engineered a scalable Point-of-Sale (POS) system for retail and clothing store sectors.
- Implemented automated shift accounting with a local-midnight hard lock for accurate financial reporting.
- Developed customized inventory management logic to meet specific workplace operational requirements.

CERTIFICATIONS AND TRAINING

- eJPTv2 — eLearnSecurity Junior Penetration Tester
- Linux Fundamentals — TenCa Academy

LANGUAGES

- Arabic: Native
- English: Professional Working Proficiency
